AI-Native Business Operating System

Unified CRM, Finance, Marketing, and Knowledge - orchestrated by AI

90%	37+	0	<3s
FEATURE COMPLETE	AI TOOLS	TYPESCRIPT ERRORS	AI RESPONSE

The Problem

Tool Fragmentation

- Businesses use 6-10 disconnected tools
- Data lives in silos with no single source of truth
- Integrations are brittle and expensive

Manual Overhead

- Teams copy-paste data between systems
- Follow-ups fall through cracks
- Context lost when switching tools

AI That Can't Execute

- Most "AI features" are chatbots that suggest but don't do
- No memory across sessions
- No orchestration across systems

Agency Owner

"I spend 2 hours a day updating statuses across 4 tools. Last month I missed a client renewal because the reminder was buried in my inbox."

The Solution: Neptune

AI That Actually Executes

Neptune isn't a chatbot. It's an AI assistant with 37+ executable tools that can create contacts, schedule meetings, draft proposals, send invoices, and orchestrate across every module - all from natural language.

Unified Platform

- CRM with AI lead scoring
- Finance with invoicing & payments
- Marketing automation

AI Orchestration

- Multi-step task execution
- Context memory across sessions
- Learns user preferences

- Knowledge base with RAG search

- Proactive suggestions

Technical Overview

Architecture

```
                    CLIENT LAYER
Next.js 16  |  React 19  |  TypeScript Strict  |  Tailwind
                        |
                  API LAYER
            259 RESTful Endpoints + Clerk Auth
                        |
                NEPTUNE (AI Hub)
    Context Builder -> Model Router -> Tool Executor
                 37+ Executable Tools
                        |
  CRM Service  |  Finance Service  |  Knowledge Service
                        |
                  DATA LAYER
   PostgreSQL  |  Vector DB  |  Redis  |  Blob Storage
```

Key Technical Decisions

Decision	Choice	Why
Multi-tenancy	Application-level, day one	Every query scoped by workspace - not bolted on later
ORM	Drizzle over Prisma	Type inference without codegen, better edge support
AI Models	Multi-provider	OpenAI + Anthropic + Google for redundancy
Tool System	Schema-validated	Adding capability = single file, no core changes

Target Market

Primary Verticals

- B2B SaaS (Seed to Series B)
- Marketing & Creative Agencies
- Consultants & Coaches
- Professional Services

Why They Buy

- Replace 4-6 tools with one
- AI that does, not just suggests
- No ops hire needed
- First value in 5 minutes

Roadmap

Phase	Timeline	Milestones
Private Beta	Q1 2026	Neptune v2, real-time collaboration, first 50 users
Public Beta	Q2 2026	Self-service onboarding, SDK, 500 users
GA Launch	Q3 2026	Mobile apps, enterprise features, $50K MRR
Scale	Q4 2026	Enterprise sales, international, $150K MRR

Seed Round: $500K

18 months runway | Founding team (3-4) | Product-market fit
